# Preface

With the development of space techniques, more and more curious solar system bodies are being explored by humans. For example, several countries have launched orbiters and landers to the moon recently, focusing on unprecedented resources, origins and evolutions of the moon, including Japan's SELENE and ENgineering Explorer (SELENE), China's Chang'E-1/2/3 and India's Chandrayaan-1 and US's Lunar Reconnaissance Orbiter (LRO) and Gravity Recovery and Interior Laboratory (GRAIL). These missions provided direct observations on space environments, surface processes, rocks and minerals, water ice, interior structure and the origin of the moon. Furthermore, a number of upcoming lunar missions programmes have been planned, e.g., India's Chandrayaan-2, (2014), Russia's Lunar Glob 1 and 2 (2014/2015), China's Chang'E-4 (2017), and International Lunar Network (2018), which will enable us to answer more unknown questions on lunar exploration and sciences. In addition, with recent Mars Global Surveyor (MGS), Mars Express, Mars Odyssey, Mars Reconnaissance Orbiter (MRO), Venus Express, Phoenix, and so on, the atmosphere, surface processes and interior structure of the Mars, Venus and other planets were well explored and understood. However, the origin, formation and evolution on planets and exoplanets are still unclear, as well as seeking life beyond Earth.

This book will present the recent developments of planetary exploration techniques and the latest results on planetary science as well as future objectives of planetary exploration and science, e.g., lunar surface iron content and Mare Orientale basalts, Earth's gravity field, Martian radar exploration, crater recognition, ionosphere and astrobiology, exoplanetary atmospheres and planet formation in binaries. It will help readers to quickly familiarize themselves with the field of planetary exploration and science. In addition, it is also useful for planetary probe designers, engineers and other users' community, e.g., planetary geologists and geophysicists. This work was supported by the National Basic Research Program of China (973 Program) (Grant No. 2012CB720000) and Main Direction Project

of Chinese Academy of Sciences (Grant No. KJCX2-EW-T03). Meanwhile, we would like to gratefully thank Springer Publisher for their processes and cordial cooperation to publish this book.

# Contents

<b>1</b>	<b>Partial Least Squares Modeling of Lunar Surface FeO Content with Clementine Ultraviolet-Visible Images</b> .....	1
	Lingzhi Sun and Zongcheng Ling	
<b>2</b>	<b>Quantitative Characterization of Lunar Mare Orientale Basalts Detected by Moon Mineralogical Mapper on Chandrayaan-1</b> .....	21
	S. Arivazhagan	
<b>3</b>	<b>Gravity Changes over Russian River Basins from GRACE</b> .....	45
	Leonid V. Zotov, C.K. Shum, and Natalya L. Frolova	
<b>4</b>	<b>Gravimetric Forward and Inverse Modeling Methods of the Crustal Density Structures and the Crust-Mantle Interface</b> ...	61
	Robert Tenzer and Wenjin Chen	
<b>5</b>	<b>Radar Exploration of Mars: Recent Results and Progresses</b> .....	77
	Stefano Giuppi	
<b>6</b>	<b>Automatic Recognition of Impact Craters on the Martian Surface from DEM and Images</b> .....	101
	Tengyu Zhang and Shuanggen Jin	
<b>7</b>	<b>Upper Ionosphere of Mars During Solar Quiet and Disturbed Conditions</b> .....	119
	S.A. Haider	
<b>8</b>	<b>Mars Astrobiology: Recent Status and Progress</b> .....	147
	Antonio de Morais M. Teles	
<b>9</b>	<b>Classical Physics to Calculate Rotation Periods of Planets and the Sun</b> .....	247
	Sahnggi Park	

<b>10</b>	<b>Estimates of the Size of the Ionosphere of Comet 67P/Churyumov–Gerasimenko During Its Perihelion Passage in 2014/2015</b> .....	271
	Wing-Huen Ip	
<b>11</b>	<b>Photometric and Spectroscopic Observations of Exoplanet Transit Events</b> .....	279
	Liyun Zhang and Qingfeng Pi	
<b>12</b>	<b>Photochemistry of Terrestrial Exoplanet Atmospheres</b> .....	291
	Renyu Hu	
<b>13</b>	<b>Planet Formation in Binaries</b> .....	309
	P. Thebault and N. Haghighipour	

## About the Editor

**Shuanggen Jin** is a Professor at the Shanghai Astronomical Observatory, CAS and Bulent Ecevit University, Turkey. He received the B.Sc. degree in Geodesy/Geomatics from Wuhan University in 1999 and the Ph.D. degree in GNSS/Geodesy from University of Chinese Academy of Sciences in 2003. His main research areas include satellite navigation, remote sensing, satellite gravimetry and space/planetary exploration as well as their applications. He has published over 200 papers in *JGR*, *IEEE*, *EPSL*, *Icarus*, *GJI*, *JG*, *Proceedings* etc., seven books/monographs and seven patents/software copyrights. He has been President of the International Association of Planetary Sciences (IAPS) (2013–2017), Chair of the IAG Sub-Commission 4.6 (2011–2015), Editor-in-Chief of *International Journal of Geosciences*, Associate Editor of *IEEE Transactions on Geoscience and Remote Sensing* (2014–), Associate Editor of *Journal of Navigation* (2014–), Associate Editor of *Advances in Space Research* (2013–), Editorial Board member of *Journal of Geodynamics* (2014–), *Planetary and Space Science* (2014–) and other seven international journals. He has received Special Prize of Korea Astronomy and Space Science Institute (2006), 100-Talent Program of Chinese Academy of Sciences (2010), Fellow of International Association of Geodesy (IAG) (2011), Pujiang Talent Program of Shanghai (2011), Fu Chengyi Award of Chinese Geophysical Society (2012), Second Prize of Hubei Natural Science Award (2012), Second Prize of National Geomatics Science and Technology Progress Award (2013/2014), Outstanding Young Scientist Award of Scientific Chinese (2013), Liu Guangding Geophysical Youth Science and Technology Award (2013), and Second Prize of Shanghai Science and Technology Progress Award (2014).
